Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Aishu is supervising a construction project that needs to be completed with the help of three workers: A, B, and C.

She knows how many days each of them would take to complete the entire project individually:

A can complete it in x days, B in y days, C in z days.

Initially, all three workers (A, B, and C) work together for d_1 days.

After that, C leaves, and only A and B continue for another d_2 days.

Then B also leaves, and A works alone to finish the remaining work.

Your task is to help aishu to implement this functionality using the class `WorkDistribution` and Method `calculateWork(int x, int y, int z, int d1, int d2)`

Calculate the total work completed in the first d_1 days by A, B, and C. Calculate the work completed in the next d_2 days by A and B. Determine the remaining work after these $d_1 + d_2$ days.

Input Format

The first line of input contains five space-separated integers: x y z d_1 d_2

where:

x represents the Days A takes to complete the work alone

y represents the Days B takes to complete the work alone

z represents the Days C takes to complete the work alone

d_1 represents the Days A, B, and C work together

d_2 represents the Days A and B work together (after C leaves)

Output Format

The first line of output prints "Work done in first d_1 days (A+B+C): " followed by a double value rounded to 2 decimal places.

The second line of output prints "Work done in next d_2 days (A+B): " followed by a double value rounded to 2 decimal places.

The third line prints "Remaining work: " followed by a double value rounded to 2 decimal places.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 10 20 30 2 2

Output: Work done in first d_1 days (A+B+C): 0.37

Work done in next d_2 days (A+B): 0.30

Remaining work: 0.33

Answer

```
import java.util.*;
import java.io.*;
import java.text.DecimalFormat;
class work{
    public static void main(String args[]){
        Scanner S = new Scanner(System.in);
        double x= S.nextInt();
        double y=S.nextInt();
        double z=S.nextInt();
        double d1=S.nextInt();
        double d2=S.nextInt();
        DecimalFormat df= new DecimalFormat("#0.00");
        double w1=d1*(1/x+1/y+1/z);
        double w2=d2*(1/x+1/y);
        double r=1-(w1+w2);
        System.out.println("Work done in first d1 days (A+B+C): "+(df.format(w1)));
        System.out.println("Work done in next d2 days (A+B): "+(df.format(w2)));
        System.out.println("Remaining work: "+(df.format(r)));

    }
}
```

Status : Correct

Marks : 10/10
